Applicant's amendment, filed 23 June 2004, places independent claims 1, 10, 19, 20, 23, and 25 and all claims dependent thereof in condition for allowance, and are hereby entered.

Allowable Subject Matter

Claims 1-21 and 23-25 are allowed.

Claim 22 is cancelled.

The following is an examiner's statement of reasons for allowance:

In the office action, filed 27 February 2004, the examiner rejected the limitation concerning generating an AC power signal containing a fundamental frequency that is centered between 20 kHz and 200 kHz, i.e. 110 kHz. While relying on Bissell, the prior art made no reference to generating a high-frequency AC power signal on home telephone lines, but rather generating an AC power signal below the POTS band.

In an attempt to overcome the deficiency of Bissell, the examiner made a design choice rejection, stating that the AC power signal could be placed below the POTS band while maintaining functionality. See pages 3-4 of the first action on the merits. The applicant has convincingly argued against the design choice rejection made by the examiner. See pages 13-16 of the applicant's response, in particular, page 15, first paragraph.

Because all independent claims include the limitation wherein the AC power signal's fundamental frequency is particularly centered between 20 kHz and 200 kHz,

Art Unit: 2644

i.e. 110 kHz, all independent claims and their associated dependent claims are allowable over the cited prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
